Profile

QA engineer with 11 years in software testing, the last four in automation with Playwright, Cucumber.js and TypeScript on a fintech back-office platform.

My work covered UI, API and backend testing across microservices, with request tracing in Kibana and release verification on staging and production.

I was the QA point of contact through UAT and go-live, resolving issues in real time so releases were not blocked, in distributed Agile teams across several time zones.

Experience

Senior Quality Analyst

Sportserve, Belgrade | 2022 - 2026

Test automation & framework

- Wrote and maintained tests in the Playwright + TypeScript suite, writing Cucumber/Gherkin scenarios and page objects on a Page Object Model structure.
- Wrote page objects and Cucumber scenarios covering back-office modules such as role management, bank account configuration and daily balance monitoring.

API & backend testing

- Tested APIs and backend flows, verifying request/response headers and event data across microservices through Kibana logs.
- Tested financial and banking features in a large-scale back-office platform, covering deposits, withdrawals and payment provider flows.

Release & CI/CD

- Worked with the GitLab CI/CD pipeline and release workflows, with branching and code reviews in Git.
- Tested release branches on staging before handover to UAT, then acted as the QA point of contact through UAT and go-live, resolving issues in real time so stakeholders were never blocked.

Agile delivery & process

- Worked in Scrum ceremonies - two-week sprint planning, refinement and retrospectives - with cross-functional teams across several time zones on a globally scaled, microservice-based system.
- Managed test cases in TestRail and tracked defects in Jira, writing reproducible, technically precise bug reports.

Software QA Engineer

IGT, Belgrade | 2015 - 2022

- Performed functional, integration, system, regression, exploratory and load testing of online casino games against customer, jurisdictional, regulatory and functional specifications.
- Reviewed product documentation and release packages for conformance and release readiness.
- Created, maintained and executed detailed test plans, test cases and test documentation with effort estimations, across system, integration and regression cycles.
- Documented and tracked defects in Jira, performed root cause analysis with the development team and proposed corrective action.

Skills

Test automation

Playwright, TypeScript, JavaScript, Cucumber / Gherkin, BDD, Page Object Model

API & backend testing

Postman, Bruno, Swagger, REST API testing, SQL, Kibana / ELK log verification, microservices

Test management & process

Jira, TestRail, Testmo, Agile, Scrum, UAT, test plans & effort estimation, defect analysis

Testing types

Manual, automated, regression, exploratory, integration, system, load

Tooling & environments

Git, GitLab CI/CD, Linux, Windows

Education

Belgrade Business School

Department of Informatics and e-business 2004 - 2008

Secondary Technical School

"Rade Koncar"

Software Programming
2000 - 2004

ISTQB course

2018 - 2019

Languages

Serbian

Native

English

Proficient

- Contributed to defining internal test standards and procedures, reported progress and quality status to stakeholders, and mentored new hires on the test process.

Administrator and Technical Support Specialist

ROHE d.o.o, Belgrade | 2013 - 2015

- Network maintenance, server administration, and technical support for workstations, operating systems and cash registers.

IT Support

Elektrodistribucija Beograd (EDB) | 2011 - 2012

- Technical support for employees, software installations and system updates across hardware and network resources.

IT System Technician

Asoft4Solution, Belgrade | 2010 - 2011

- Installation and servicing of POS terminals for Komercijalna Banka, with technical support and customer training.

Achievements

API migration verified. Validated a backend HTTP client migration (GuzzleClient to Symfony HttpClient) that touched critical financial flows, covering ~20 test scenarios on two brands (Dafabet, Nextbet) and confirming no regressions before release.

Automated negative-path coverage. Introduced automated negative test scenarios (mandatory field validation, duplicates, min/max values) into the Playwright/Cucumber suite, reducing reliance on manual regression testing.

Strengths

- Detail-oriented
- Analytical
- Organized
- Strong communicator
- Problem solver
- Team player

Outside work

Runs a small furniture studio in Belgrade, designing and building industrial-style pieces in metal and wood.

E2E Test Automation Framework

github.com/jojasti/eye4art-e2e

Playwright · TypeScript ·
Cucumber/BDD · GitHub Actions

- Built the framework from scratch against a live production site - project structure, base page, page objects, Gherkin scenarios and CI
- Quality gates in GitHub: protected main branch, pull requests required, tests must pass before merge, no bypass
- AI-assisted workflow: a coding agent writes tests batch by batch from a test plan, a read-only reviewer agent checks them, and I review and merge.
