Profile

QA engineer with 11 years of experience in software testing, including four years in automation using Playwright, TypeScript and Cucumber.js. At Sportserve, I worked across UI, API and backend testing of a fintech back-office platform, using Kibana and SQL to investigate issues across microservices.
I supported release verification, UAT and go-live as the QA point of contact, working closely with developers and other teams across time zones.
I use AI tools daily for test design, log analysis and code review, and I verify their output before using it.
Outside work, I built an E2E framework from scratch for a production website, with 110+ scenarios running daily in GitHub Actions.

Experience

Senior Quality Analyst

Sportserve, Belgrade | 2022 - 2026

Test automation & framework

- Maintained the Playwright and TypeScript test suite, developing Cucumber/Gherkin scenarios and page objects using the Page Object Model. The suite covered approximately 250 scenarios across three environments.
- Covered back-office modules such as role management, bank account configuration and daily balance monitoring.

API & backend testing

- Tested API and backend flows across microservices, using Kibana to investigate request/response headers and event data, and SQL queries to verify database records.
- Tested financial and banking features in a large-scale back-office platform, covering deposits, withdrawals and payment provider flows.

Release & CI/CD

- Worked with GitLab CI/CD and Git-based release workflows, including branching and merge request reviews. The suite ran in the release workflow and daily on staging to catch bugs before production.
- Verified release branches on staging before UAT and supported go-live as the QA point of contact, investigating issues and coordinating with stakeholders.

Agile delivery & process

- Worked in Scrum with two-week sprints - sprint planning, refinement and retrospectives - with cross-functional teams across multiple time zones.
- Managed test cases in TestRail and tracked defects in Jira, writing reproducible, technically precise bug reports.
- Wrote how-to guides and test documentation in Confluence for the team and other departments, and helped new QA colleagues learn the application and the test process.

Software QA Engineer

IGT, Belgrade | 2015 - 2022

- Performed functional, integration, system, regression, exploratory and load testing of online casino games against customer, jurisdictional, regulatory and functional specifications.
- Reviewed product documentation and release packages for conformance and release readiness.
- Created, maintained and executed detailed test plans, test cases and test documentation with effort estimations, across system, integration and regression cycles.
- Documented and tracked defects in Jira, performed root cause analysis with the development team and proposed corrective action.
- Contributed to defining internal test standards and procedures, reported progress and quality status to stakeholders, and mentored new hires on the test process.

Skills

Test automation
Playwright, TypeScript, JavaScript, Cucumber / Gherkin, BDD, Page Object Model, Allure, AI-assisted QA, Claude Code

API & backend testing
Postman, Bruno, Swagger, REST API testing, SQL, Kibana / ELK log verification, microservices

Test management & process
Jira, TestRail, Testmo, Confluence, Agile, Scrum, UAT, test plans & effort estimation, defect and root cause analysis

Testing types
Manual, automated, E2E, smoke, regression, exploratory, integration, system, load

Tooling & environments
Git, GitLab CI/CD, GitHub Actions, Linux, Windows

Education

Belgrade Business School
Department of Informatics and e-business 2004 - 2008

Secondary Technical School "Rade Koncar"
Software Programming
2000 - 2004

ISTQB course
2018 - 2019

Languages

Serbian
Native

English
Proficient

Administrator and Technical Support Specialist

ROHE d.o.o, Belgrade | 2013 - 2015

- Network maintenance, server administration, and technical support for workstations, operating systems and cash registers.

IT Support

Elektrodistribucija Beograd (EDB) | 2011 - 2012

- Technical support for employees, software installations and system updates across hardware and network resources.

IT System Technician

Asoft4Solution, Belgrade | 2010 - 2011

- Installation and servicing of POS terminals for Komercijalna Banka, with technical support and customer training.

Achievements

API migration verified. Verified a backend HTTP client migration from GuzzleClient to Symfony HttpClient across critical financial flows. Executed approximately 20 test scenarios across Dafabet and Nextbet, confirming no regressions before release.

Automated negative-path coverage. Added automated negative-path scenarios for mandatory fields, duplicate entries and minimum/maximum values to the Playwright/Cucumber suite, reducing reliance on manual regression testing.

PERSONAL PROJECT

E2E Test Automation Framework

Built in my own time to test my furniture studio's live website end to end, and to set up a complete framework and CI from zero, not only write tests in an existing one.

github.com/jojasti/eye4art-e2e

Playwright · TypeScript · Cucumber/BDD · Allure · GitHub Actions

- Project structure with a base page, page objects on the Page Object Model and Gherkin scenarios.
- 110+ scenarios running on every push and daily in GitHub Actions, with lint, type check and tests as quality gates.
- Protected main branch: pull requests required and tests must pass before merge, with no bypass.
- Runs safely against production: read-only tests, analytics blocked and form requests mocked.
- AI-assisted workflow: a coding agent writes tests batch by batch from a test plan, a read-only reviewer agent checks them, and I review and merge.

Strengths

- Detail-oriented
- Analytical
- Organized
- Strong communicator
- Problem solver
- Team player

Outside work

Runs a small furniture studio in Belgrade, designing and building industrial-style pieces in metal and wood.
